ADVACED SUB ARRAY PROBLEM You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distant from the backet and the player's position. The ball is shot N times a presentable You are given an array A containing the	-C509638R1235
You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distan	
distance of a place form has lost for Nachota. The index of a management the providing of the place of a place of the place of a place of the place of a place of the place of	by
multiplying the position with the distance from the basket. Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a	
Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	596 38R
Note:	
* A subarray is a contiguous part of array.	,8R ² 3C5
* Assume 1 based indexing.	BRIT
* The array contains both negative and positive values.	
* Assume the player is standing on a cartesian plane.	355096
Input Format	303
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	
- input2 : An integer K representing the size of subarray	,96 38R
- input3 : An array of integers	500
Sample Input 5	C
	S. C.
